- Dropbox-like data synchronization

Aug 2011 - Jul 2014
Offenbach, Germany

Junior Software Engineer
[Glück & Kanja Consulting AG](#)

- Setup and update routine of enterprise product
- Windows Store App RMS Viewer
- Porting and testing of mobile apps

PROJECTS

Outfittery

Outfittery GmbH

Oct 2017 - present

Outfittery is Europe's leading personal shopping service for men. Outfittery combines Artificial Intelligence with real-life stylists to help customers find the right clothes. In 2018 Outfittery served 500,000 customers in eight European countries.

Currently my responsibilities include strategical technical planning, technical leadership for customer facing applications frontend, continuous development and maintenance of the product, interviewing frontend and QA engineers as well as filling and prioritizing the backlog with product managers.

Besides continuously improving the product and code base my key achievements are planning and executing the migration to React, establishing a frontend user group, setting up a JS style guide in our projects and introducing a new careers page in collaboration with contractors.

- React, Redux, Redux-Saga, AngularJS
- JavaScript, HTML, CSS, Sass
- Webpack, Babel, Jest, Docker
- Bootstrap, npm, Git, Jenkins, Pimcore

Magine TV

Magine Germany GmbH

Oct 2016 - Sep 2017

Magine Germany operated an online television streaming platform with over 1 million active users. In 2019 the platform was discontinued and the 150.000 paying customers were acquired by Europe's leading online TV platform Zattoo.

In this role I ensured that the code base complied with latest web standards and best practices. This included upgrading the AngularJS version, rewriting many frontend services and introducing Webpack and SCSS. I developed a majority of the streaming page on which users watched TV. With the customer support team I was able to plan and release the Zendesk help center. The marketing teams could rely on me and get help with IT questions, the maintenance of the Wordpress CMS and respective code changes.

- AngularJS, JavaScript, HTML, CSS, Sass
- Webpack, Babel, GulpJS, Bootstrap, jQuery
- Node.js, npm, Git, Jenkins
- PHP, Wordpress, Zendesk

8MAN - Access Rights Manager

Protected Networks GmbH

Nov 2015 - Aug 2016

Leading European solution for work flow-based access rights management, offering permission analysis, security monitoring, documentation and reporting, and user provisioning. Enables companies and public authorities in protecting their IT systems by offering an easy-to-understand display, management and control of access and permission rights.

This project gave me the opportunity to build this technically cutting edge web application. I made major technology and design decisions. Changes I introduced include rewriting and porting unstructured JavaScript code to TypeScript, unit testing with Jasmine and dropping the previous frontend framework in favor of Angular 2. I was also involved in the development of the C# ASP.NET Web API endpoints.

- Angular 2, TypeScript, JavaScript, HTML, CSS
- Bootstrap, jQuery, Sass, Jasmine, Karma
- npm, Git, TFS, GulpJS, RxJS, PhantomJS, SystemJS
- C#, ASP.NET, Web API

CloudBoot

Glück & Kanja Consulting AG

Jan 2015 - Sep 2015

CloudBoot enables operating system deployment over the internet.

For this project I developed the client application which is embedded inside an USB stick from which users boot into the operating system setup. As well as the server side which is responsible for handling authentication, updating the client and providing customized operating system images and additional configuration for each customer. The user can install any operating system of their choice and has the convenience of pre-configured custom operating system images. An operating system installs unattended over the internet and optional configuration is possible through the client.

- C#, XAML, WPF, ASP.NET, Git
- Windows PE, Embedded System
- Operating System Hooks, iPXE, Batch, Jenkins
- Microsoft ADK, Microsoft Azure, AWS, iSCSI

RMS Viewer

Glück & Kanja Consulting AG

Feb 2012 - Feb 2015

RMS Viewer extends Windows Rights Management on iOS, Android, Windows RT and BlackBerry devices for mobile data security.

I developed the server setup and update routine for this enterprise product. This required me to have good understanding of Windows Server 2008 - 2012 R2, IIS Webservice, NSIS and VBScript. Further responsibilities included the development and maintenance of our C++/CX Windows Store App. For the remaining mobile platforms I was able to help with manual testing and porting the code base.

- NSIS, C++/CX, Java, VBScript, SVN, Git, Jenkins
- Windows Server 2008 - 2012 R2, RMS, IIS Webservice
- Windows App, Android, BlackBerry, IOS

COMMUNICATION SKILLS

GERMAN
ENGLISH

Native
Fluent

LIKES

React, Vue, JavaScript
Functional Programming, Git
Cloud Services, Microservice Architecture

DISLIKES

PHP, Visual Basic, TFS
